

The grammar of how societies register who belongs.

ontology360.it · one page

Ontology 360 is the research matrix of the Computational Ontology project (Luis Bourguet, LabOnt — Centre for Ontology, Università di Torino; ORCID 0000-0002-4673-4486): a computational social ontology in which every claim travels one chain of five links and is marked as datum, interpretation or normative judgement.

THE CHAIN — FIVE LINKS, ONE CIRCLE

1	Circumstance	Being: what no amendment reaches — natality, plurality, mortality, the Earth (Arendt, Onnis, Ortega).
2	Register	Object = inscribed act; identity by signature, belonging by shared inscription; the digital as re-inscription (Ferraris, Floridi).
3	Domains · domination	Four social domains, one register of belonging each; domination = control of who is inscribed and who controls the inscription (Romero, Anderson, Todorov).
4	Constitutional architecture	The constitution as meta-register, read on the Comparative Constitutions Project / Constitute with stable ids (Andina, Pegoraro & Rinella).
5	Normative consequence	Plural constitutionalism — written by a person, signed, never produced by a frequency, a model or a simulation.

ONE PROJECT, THREE SITES

Matrix · ontology360.it The grammar; the book <i>La Constitución en la era digital</i> (manuscript in draft, intended for Herder, not yet submitted); the open companion at data.ontology360.it.	Project · computational-ontology.com Systems derived and validated: SOCE (exclusion cycle, 11 cases, 5 families) and EMERGENZA (constitutional endurance on CCP); deposits with DOI.	Platform · constitutionsplus.com Constitutions as complex adaptive systems: ABM, system dynamics, network analysis, a visual evidence layer and a human verdict. Specified, in preparation.

METHOD IN THREE RULES

Two layers, one firewall. Ontology commitments stated before coding; every unit traceable from span to code to interpretation; no technique generates a norm. **α policy.** Two or three coders, thresholds fixed in advance (0.67 exploratory · 0.80 conclusion · below 0.67 stop), disagreements resolved by a new codebook version, never by vote. **Two tiers.** Exploratory readings open to anyone; a canonical reading needs trained coders and an α pass.
